

ALVIN KIPNG'ENO LANGAT

Business Technology Professional | Software Developer

Nairobi, Kenya | +254 710 493 295 | alvinlangat.al@gmail.com

[LinkedIn](#) | [GitHub](#) | [Portfolio](#)

PROFESSIONAL SUMMARY

Business technology professional and software developer with experience building full-stack applications, AI/ML solutions, business management systems and digital tools, and taking projects from development through to production deployment. Combines technical skills in software development, data management and problem-solving with practical business operations experience in inventory management, sales, client coordination and process analysis. Detail-oriented, adaptable and results-focused, with a strong understanding of both technical and business requirements. Currently completing a Bachelor of Business Information Technology at JKUAT.

CORE SKILLS

Programming: Python, JavaScript, TypeScript, C++, HTML5, CSS3

Frameworks & Development: React, FastAPI, Express, Vite, Material UI, REST API Development

Databases & Data: PostgreSQL, SQLAlchemy, Prisma, pgvector, Redis, Database Design, Data Management

AI & Machine Learning: Machine Learning, AI-Assisted Applications, Retrieval-Augmented Generation (RAG), Vector Search, Ollama, Google Gemini, ONNX, Prompt Engineering

Authentication & Security: JWT, Role-Based Access Control (RBAC), Authentication, Authorization

Testing & Engineering: pytest, Software Testing, Debugging, API Testing, Database Migrations, Technical Documentation

Version Control & Deployment: Git, GitHub, Cloudflare, Vercel, Northflank, Render, Neon PostgreSQL, Supabase Storage

Business Technology: Business Systems, Inventory Management, Process Analysis, Workflow Automation, Data Management

Professional & Productivity: Problem-Solving, Communication, Project Coordination, Microsoft Excel, Word, Outlook, Google Docs

PROFESSIONAL EXPERIENCE

Freelance Software Developer

Jan 2024 – Present

Upwork | Remote

- Develop custom software solutions and web applications tailored to client requirements and operational needs.
- Troubleshoot software issues, implement bug fixes and improve application performance and functionality.
- Enhance existing applications through feature development, technical updates and maintenance.
- Communicate with clients to understand requirements, provide project updates and deliver solutions within agreed timelines.

Freelance Software Developer & Data Entry Specialist

Nov 2023 – Sep 2026

Fiverr | Remote

- Developed software solutions using Python, JavaScript, C++, HTML and CSS based on client requirements and operational needs.
- Performed data entry, web research, data organization and document preparation with strong attention to accuracy.
- Used Git and GitHub for version control and software project management.
- Prepared technical documentation and maintained organized project deliverables.
- Managed multiple assignments while meeting client requirements, quality standards and deadlines.

Executive Assistant (Contract Support)

Jun 2025 – Aug 2025

Athena Client Projects | Remote

- Supported client projects delivered through Athena while working under contract supervision.
- Supported business operations by creating digital vCards and maintaining client information in Salesforce.
- Coordinated travel logistics through TripAdvisor and managed event scheduling using Outlook Calendar.
- Conducted a comparative analysis of FedEx and UPS shipping rates to optimize cost efficiency.
- Designed and maintained an Excel-based “tombstone” tracker for car brands, dealerships and inventory.

Sales Agent

Nov 2023 – Aug 2025

House of Lavender | Ruai, Nairobi

- Processed sales transactions and managed inventory updates.
- Resolved complex customer inquiries and processed returns with tailored solutions, contributing to a positive brand reputation.
- Maintained organized stock levels and carried out weekly restocking and reconciliation.

EDUCATION

Bachelor of Business Information Technology (BBIT)

2024 – Present

Jomo Kenyatta University of Agriculture and Technology (JKUAT)

Kenya Certificate of Secondary Education (KCSE)

2023

Sochoi Boys High School | School Captain: led the student body and coordinated school functions

SELECTED PROJECTS

The Polished Co. Ke – Business Website & Digital Customer Experience

[GitHub](#) | [Live Demo](#)

Technologies: Astro, HTML, CSS, JavaScript, Responsive Web Design, GitHub Pages

- Designed and developed a responsive business website for a beauty services brand in Juja, Kenya, showcasing services, brand information, customer reviews and social media presence.
- Implemented customer enquiry and booking flows with WhatsApp integration, enabling visitors to contact the business directly from the website.
- Integrated Instagram and TikTok touchpoints and optimized the website for mobile, accessibility and a polished user experience.
- Deployed and maintained the production website on GitHub Pages with an automated deployment workflow.

Forex AI Analyst – Full-Stack AI/ML Application

[GitHub](#) | [Live Demo](#)

Technologies: React, TypeScript, FastAPI, Python, PostgreSQL, Redis, Machine Learning

- Developed a full-stack foreign exchange and gold market analysis platform integrating six machine learning models with technical indicators and market-structure analysis.
- Implemented analytical workflows incorporating indicators such as RSI, MACD, ADX, Bollinger Bands, market structure, liquidity and fair value gaps.
- Built REST APIs and a responsive web interface for presenting market data and model-generated analysis.
- Deployed the application using Vercel, Northflank, Neon PostgreSQL and Upstash Redis.

Smart Bizz System – Business Management & Inventory Platform

[GitHub](#) | [Live Demo](#)

Technologies: React, TypeScript, Vite, Material UI, Express, Prisma, PostgreSQL, JWT

- Developed a full-stack business inventory and management platform supporting Admin, Manager and Cashier roles.
- Implemented role-based access control, inventory management, authentication and business management workflows.
- Deployed the application using Vercel, Render and Neon PostgreSQL.

RawFeed – Event-Based News Aggregation Platform

[GitHub](#) | [Live Demo](#)

Technologies: React, TypeScript, Vite, FastAPI, PostgreSQL, Redis, SQLAlchemy, Alembic, Ollama

- Developed a Kenya-first, event-based news platform designed to surface important stories while reducing information overload from social media.
- Built a FastAPI backend with authentication, user preferences, PostgreSQL persistence and Redis integration.
- Implemented scheduled news ingestion and AI-assisted enrichment workflows using a locally hosted Ollama AI model.
- Deployed the application using Vercel, Northflank, Neon PostgreSQL and Upstash Redis.

Study Assistant AI – AI-Powered Learning & Study Platform

[GitHub](#) | [Live Demo](#)

Technologies: React, TypeScript, FastAPI, Python, PostgreSQL, pgvector, Gemini, ONNX

- Developed a full-stack AI-powered learning platform that helps students understand academic material, generate practice content, organize study sessions and track academic progress.
- Implemented semantic search using PostgreSQL with pgvector and 384-dimensional embeddings generated by an ONNX-based all-MiniLM-L6-v2 model for retrieval-based learning workflows.
- Built REST APIs with FastAPI, SQLAlchemy and Alembic, incorporating authentication, data validation, database migrations and automated testing with pytest.
- Integrated Google Gemini for production AI inference through a configurable AI provider architecture, with optional Groq fallback and Ollama support for local development.
- Deployed the application using Vercel, Northflank, Neon PostgreSQL and Supabase Storage for production file uploads.
